

# RNAi Set

RNAi is now a very popular technology. Chemically synthetic siRNA became rapid and effective method for gene knockdown. We recently promoted RNAi set service. You provide only gene (target) sequence and we help you to design 4 siRNA pairs. We guarantee at least one pair can effectively suppress gene expression.

**The package includes re-synthesis of another four duplex free of charge if no obvious knockdown result (60%) is achieved with the first four duplexes.\***

The RNAi Sets Includes :

1. 4 pairs of corresponding gene siRNA, HPLC purification, 10nmol
2. Negative control, 1 pair, HPLC purification, 1 OD
3. Negative control, FAM labelled siRNA, 1 pair, HPLC purification, 1 OD
4. Positive control GAPDH, 1 pair, HPLC purification, 1 OD
5. Transfection reagent RNAi-mate, 100ul

**Cat# : SI-SET**  
**Price of the package : 300 euros**

\* You will pay only the shipping charges.
